

ORDINANCE NO. 442

**AN ORDINANCE REGULATING STORMWATER RUNOFF
FROM DEVELOPMENT SITES WITHIN THE CITY OF BAY ST. LOUIS, MISSISSIPPI**

WHEREAS, the governing authorities of the City of Bay St. Louis, Mississippi (the "City") did, in March of 2003, adopt a Stormwater management Plan (the "Plan") pursuant to the requirements of the Federal Phase II Stormwater Regulations (the Regulations"); and

WHEREAS, the Plan calls for the adoption of certain ordinances in order to bring the City into compliance with the Regulations.

NOW THEREFORE, BE IT ORDAINED by the governing authorities of the City of Bay St. Louis, Mississippi, as follows:

Section 1. General Provisions

1.1 Findings of Fact

It is hereby determined that:

Land development projects and associated increases in impervious cover alter the hydrologic response of local watersheds and increase stormwater runoff rates and volumes, flooding, stream channel erosion, and sediment transport and deposition; and this stormwater runoff contributes to increased quantities of water-borne pollutants, Stormwater runoff, soil erosion and nonpoint source pollution can be controlled and minimized through the regulation of stormwater runoff from development sites.

Therefore, the City of Bay St. Louis, Mississippi establishes this set of water quality and quantity policies applicable to all surfaces to provide reasonable guidance for the regulation of stormwater runoff for the purpose of protecting local water resources from degradation. It is determined that the regulation of stormwater runoff discharges from land development projects and other construction activities in order to control and minimize increases in stormwater runoff rates and volumes, soil erosion, stream channel erosion, and nonpoint source is in the public interest and will prevent threats to public health, safety and welfare.

1.2 Purpose

The purpose of this ordinance is to establish minimum storm water management requirements and controls to protect and safeguard the general health, safety, and welfare of the public residing in watersheds within this jurisdiction. This ordinance seeks to meet that purpose through the following objectives;

- (1) Minimize increase in storm water runoff from any development in order to reduce flooding, siltation, increases in stream temperature, and stream bank erosion and maintain the integrity of stream channels;
- (2) Minimize increase in nonpoint source pollution caused by storm water runoff development which would otherwise degrade local water quality;
- (3) Minimize the annual volume of surface water runoff which flows from any specific site during and following development to not exceed the pre-development hydrologic regime to the maximum extent practicable;
- (4) Reduce storm water runoff rates and volumes, soil erosion and nonpoint source pollution, wherever possible, through storm water management controls and to ensure that these management controls are properly maintained and pose no threat to public safety.

1.3 Applicability

All development or redevelopment projects must provide a Stormwater Control Plan as part of their site plan review process and prior to disturbance of the site.

Single family and all multi-family units under four units, must submit a Standard Erosion Control Plan and Drainage Plan on a Worksheet provided by the Bay St. Louis Building Office prior to any disturbance of a site.

Projects larger than one acre must provide a copy of their completed Stormwater Plan, which is required by MDEQ as part of their NPDES Phase I or Phase II permit, with the site Plan Review documents.

1.4 Exceptions to Applicability

1.4.1 To prevent the adverse impacts of stormwater runoff, performance criteria must be met at new development sites. These standards apply to any construction activity disturbing land. The following activities may be exempt from these stormwater criteria:

- a. Any logging and agricultural activity which is consistent with approved soil conservation plan or timber management plan or Forestry Best Management Practices Handbook published by the Mississippi Forestry Commission, as applicable.
- b. Additions or modifications to existing single family structures.
- c. Developments that are part of larger redevelopment or development common plan provided that a Stormwater Management Plan has been completed and approved by MDEQ.

1.4.2 The Bay St. Louis City Council shall have the power to authorize variances from the provisions or requirements of this Ordinance as will not be contrary to the public interest, provided that the applicant for an exception follows the rules and procedures required by the Bay St. Louis Planning Commission as defined within section 1005 of the Bay St. Louis Zoning Ordinance. No variance from the strict application of any provision shall be granted unless it is found that:

- a. Literal interpretation of the provisions of the Ordinance would deprive the owner of reasonable use of their land; and
- b. Granting the variance would be in harmony with the general purpose and intent of this Ordinance and will not be injurious to the neighborhood or otherwise detrimental to the public welfare.

1.5 Repeal of Conflicting Ordinances

All ordinances or part of an Ordinance, in conflict with this Ordinance, or inconsistent with the provisions of this Ordinance, are hereby repealed to the extent necessary to give this Ordinance full force and effect.

1.6 Validity

If for any reason, one or more articles, sections, or subsections of this Ordinance are held invalid or unconstitutional, such judgment shall not effect, invalidate or prejudice the remaining provisions of this Ordinance.

1.7 Stormwater Design Manual

The Stormwater Design Manual identified in the Ordinance will be the Planning and Design manual for the Control of Erosion, Sediment, and Stormwater written by the Mississippi Department of Environmental Quality, the Mississippi Soil and Water Conservation Commission and the USDA Soil Conservation Service.

Section 2. Definitions

“Applicant” means a property owner or agent who has filed an application for a stormwater management permit.

“Building”, any structure built for the support, shelter, or enclosure of person, animals, chattels, or moveable property of any kind and which is permanently affixed to the land.

“Building Official”, means any Bay St. Louis employee or elected or appointed official charged with enforcement of the Ordinance.

“Certificate of Occupancy”, a permit issued by the Zoning Officer indicating that the use of the building or land in question is in conformity with the Zoning Ordinance or that there has been a legal variance there from, as provided by ordinance.

“Channel”, means a natural or artificial watercourse with definite bed and banks that conducts continuously or periodically flowing water.

“Dedication”, means the deliberate appropriation of property by its owner for general public use.

“Detention”, means the temporary storage of stormwater runoff in a stormwater management practices with goals of controlling peak discharge rates and providing gravity settling of pollutants.

“Developer”, means a person who undertakes land disturbance or development activities.

“Development”, means any man-made change to improved or unimproved real estate, including but not limited to buildings or other structures, mining, dredging, filling, grading, paving, excavation, or drilling operation.

“Drainage Easement”, means a legal right granted by the landowner to a grantee allowing use of private land for stormwater management purposes.

“Erosion and Sediment Control Plan”, means a plan that is designed to minimize the accelerated erosion and sediment runoff at a site during construction activities.

“Forestry Best Management Practices”, means silvicultural practices developed and endorsed by the Mississippi Forestry Commission to prevent soil erosion and surface water degradation due to timber harvest.

“Hotspot”, means an area where land use or activities generate highly contaminated runoff, with concentrations of pollutants in excess of those typically found in stormwater.

“Impervious Coverage”, means those surfaces that cannot effectively infiltrate rainfall (e.g., building rooftops, pavement, sidewalks, driveways, etc.)

“Industrial Stormwater Permit”, means a National Pollutant Discharge Elimination System permit issued to a commercial industry or group of industries which regulates the pollutant levels associated with industrial stormwater discharges or specifies on-site pollution control strategies.

“Infiltration”, means the process of percolating stormwater into the subsoil.

“Infiltration Facility”, means any structure or device designed to infiltrate water to the subsurface. These facilities may be above grade or below grade.

“Jurisdictional Wetland”, means an area that is subject to permit jurisdiction by the U.S. Army Corps of Engineers under Section 10 of the Rivers and Harbor Act or Section 404 of the Clean Water Act.

“Land Disturbance Activity”, means any activity which changes the volume or peak flow discharge rate of rainfall from the land surface. This may include grading, digging, cutting, scraping, or excavating of soil, placement of fill materials, paving, construction, substantial removal of vegetation, or any activity which bares soil or rock or involves the diversion or piping of any natural or man-made watercourse.

“Landowner”, means the legal or beneficial owner of land, including those holding the right to purchase or lease the land, or any other person holding proprietary rights in the land.

“Maintenance Agreement”, means a legally recorded document that acts as a property deed restriction and which provides for long-term maintenance of stormwater management practices.

“Nonpoint Source Pollution”, means pollution from any source other than from any discernible, confined and discrete conveyances, and shall include, but not be limited to, pollutants from agricultural, silviculture, mining, construction, subsurface disposal and urban runoff sources.

“Off-Site Facility”, means a stormwater management measure located outside the subject property boundary described in the permit application for land development activity.

“On-Site Facility”, means a stormwater management measure located within the subject property boundary described in the permit application for land development activity.

“Recharge”, means the replenishment of underground water reserves.

“Redevelopment”, means any construction, alteration or improvement exceeding 500 square feet in areas where existing land use is high density commercial, industrial, institutional or multi-family residential.

“Stop Work Order”, means an order issued which requires that all construction activity on a site be stopped.

“Stormwater Design Manual”, means the Planning and Design Manual for the Control of Erosion, Sediment and Stormwater written by the Mississippi Department of Environmental Quality, Mississippi Soil and Water Conservation Commission and the USDA Soil Conservation Service.

“Stormwater Management”, means the use of structural or non-structural practices that are design to reduce stormwater runoff pollutant loads, discharge volumes, and/or peak flow discharge rates.

“Stormwater Retrofit”, means a stormwater management practice designed for an existing development site that previously had either no stormwater management practice in place or a practice inadequate to meet the stormwater management requirements of the site.

“Stormwater Runoff”, means water flow on the surface of the ground, resulting from precipitation.

“Stormwater Treatment practices”, means measures, either structural or nonstructural, that are determined to be the most effective, practical means or preventing or reducing point source or nonpoint source pollution inputs to stormwater runoff and water bodies.

“Variance”, means a modification from the literal provisions of this Ordinance in cases where a literal enforcement of its provisions would result in unnecessary hardship due to circumstances unique to the individual property for which the variance is granted.

“Watercourse”, means a permanent or intermittent stream or other body of water, either natural or man-made, which gathers or carries surface water.

Section 3. Permit Procedures and Requirements

3.1 Permit Required

No land owner or land operator shall receive any zoning compliance certification, building; grading or other land development permits required for land disturbance activities without first meeting the requirement of this ordinance prior to commencing the proposed activity.

3.2 Application Requirements

Unless specifically excluded by this Ordinance, landowners proposing the development of a single family residential unit or a multi-family complex under three units shall submit to the Bay St. Louis Building Official a permit application on a form provided by the Bay St. Louis Building Office for that purpose and a non refundable permit review fee.

Unless specifically excluded by the ordinance, landowners proposing the development of commercial or multi-family units of four or more units and on a site under one acre in size, should submit a Stormwater Management Plan as part of their Site Plan Documentation, a Stormwater maintenance Agreement, and a non refundable permit review fee to the Bay St. Louis Building Office.

Unless specifically excluded by the Ordinance, landowners proposing the development of commercial or multi-family units or four or more units and on a site one acre or more, should submit a copy of their Stormwater management Plan, as required by MDEQ under the NPDES Phase I and Phase II Programs as part of their Site Plan Review Documentation, a Stormwater Maintenance Agreement and a non refundable permit review fee to the Bay St. Louis Building Office.

The Stormwater Management Plan shall be prepared to meet the requirements of Section 5 of this Ordinance. The Stormwater Maintenance Agreement shall be prepared to meet Section 9 of this Ordinance and fee shall be established by the Bay St. Louis City Council.

3.3 Application Procedure

- 3.3.1 Applications for land disturbance activity permit must be filed with the Bay St. Louis Building Office on any regular business day.
- 3.3.2 Applications for Single Family Residential Units and Multi-Family Units of three or fewer units will be reviewed by the Building Official and a designee of the Site Plan Review Committee. The Building Official will act on all applications within seven (7) working days after the applicant has fully complied with provisions of this Ordinance. The Building Official shall either issue a Permit or notify the applicant in writing of the reasons for the refusal.
- 3.3.3 Applications for all Commercial and Multi-Family Units of four units or more should submit a Stormwater Management Plan and Stormwater maintenance Agreement as part of the Site Plan Review Documentation. Within sixty (60) days of receiving an application for site plan review, the Bay St. Louis Planning Commission shall act to approve, disapprove, or approve with conditions the site plan application. In the case of approval with conditions, the Bay St. Louis Planning Commission shall specify what conditions are necessary.

If the stormwater management plan or maintenance agreement is disapproved, the applicant may revise the stormwater plan or agreement. If additional information is submitted, the Planning Commission shall have 15 business days from the date the additional information was received to inform the applicant that the plan and maintenance agreement are either approved or disapproved.

3.4 Permit Duration

Permits issued under this section shall be valid from the date of issuance through the date the Bay St. Louis Building Official notifies the permit holder that all stormwater management practices have passed the final inspection under permit conditions.

Section 4. Waivers to Stormwater Management Requirements

4.1 Waivers for Providing Stormwater Management

The Bay St. Louis City Council shall have the power to authorize variances from the provisions or requirements of this Ordinance as will not be contrary to the public interest, provided that the applicant for an exception follows the rules and procedures required by the Bay St. Louis Planning Commission as defined within Section 1005 of the Bay St. Louis Zoning Ordinance. No variance from the strict application of any provision shall be granted unless it is found that:

- a. Literal interpretation of the provisions of the Ordinance would deprive the owner of reasonable use of their land; and
- b. Granting the variance would be in harmony with the general purpose and intent of this Ordinance and will not be injurious to the neighborhood or otherwise detrimental to the public welfare.

Section 5. General Performance Criteria for Stormwater Management

Unless determined by the Bay St. Louis City Council to be exempt or granted a variance, the following performance criteria shall be addressed for stormwater management at all sites:

(A) All sites shall establish stormwater management practices to control the peak flow rates of stormwater discharge associated with specified design storms and reduce the generation of stormwater for the site to provide treatment for both water quality and quantity. Peak post-construction stormwater runoff will not exceed peak pre-construction stormwater runoff from the site to the greatest extent possible.

(B) All stormwater runoff generated from new development shall not discharge untreated stormwater directly into a jurisdictional wetland or local water body without adequate treatment. Where such discharge is proposed, the impact of the proposal on wetland functional values may be assessed using a

method acceptable to the Bay St. Louis City Council. In no case shall the impact on functional values be any less than allowed by the Mississippi Department of Environmental Quality or the Mississippi Department of Marine Resources.

(C) For new development, structural and non-structural Stormwater treatment Practices shall be designed to treat the first one inch of stormwater runoff.

(D) For new development, sanitary wastewater treatment facilities shall be designed and installed to comply with existing Mississippi Department of Health regulations, and to prevent the discharge of untreated sanitary waste that could come in contact with stormwater runoff.

(E) To protect stream channels from degradation, a specific channel protection shall be utilized. The criteria shall require 24 hour detention for runoff generated by a rainfall event based upon annual rainfall for the region.

(F) Stormwater discharges to critical areas with sensitive resources (including shellfish beds, swimming areas, water supply reservoirs and groundwater recharge areas) may be subject to additional performance criteria, or may need to utilize or restrict certain stormwater management practices.

(G) Certain industrial sites and sites of a certain size are required to prepare and implement a stormwater pollution prevention plan, and file a Notice of Intent (NOI) under the provisions of the National Pollutant Discharge Elimination System (NPDES) general permit. The stormwater pollution prevention plan requirements will be required to be submitted to the building official as part of the Site Plan Review Process.

(H) Stormwater discharges from land uses or activities with higher potential pollutant loadings, known as "hotspots", may require the use of specific structural and pollution prevention practices.

(I) Prior to design, applicants are required to consult with the Building Official to determine if they are subject to additional stormwater design requirements.

(J) The calculations for determining peak flows as found in the Stormwater Design Manual, Chapter 6. Stormwater Design Manual shall be used for sizing all stormwater management practices.

Section 6. Basin Stormwater Management Design Criteria

6.1 Minimum Control Requirements

Projects shall be designed so that post-development peak discharge for the 10, 25, and 100 year frequency storm events will not exceed the pre-development peak discharge rates for the 10, 25, and 100 year frequency storm events; unless the Bay St. Louis City Council grants the applicant a waiver or the applicant is exempt from such requirements.

In addition, if hydrologic or topographic conditions warrant greater control than that provided by the minimum control requirements, the Building Official reserves the right to impose any all additional requirements deemed necessary to control the volume, timing and rate of runoff.

6.2 Site Design Feasibility

Applicants should consider the following conditions of the site when they determine the types of practices they will use to control stormwater on the site. These include topography, the drainage area, the depth of the water table, soils, slopes, terrain and the location of environmentally sensitive areas located on site.

6.3 Specific Requirements

The Stormwater Control Practices shall be designed to remove pollutants and reduce flow velocities, shall utilize an acceptable water quality pre-treatment requirement and shall capture and treat stormwater in accordance to specifications defined in the Stormwater Design Manual.

6.4 Landscaping Plans Required

For any structural improvements proposed, a landscape plan which affords stabilizations of the areas adjacent to the improvements will be required.

6.5 Maintenance Agreements

Enforceable operations and maintenance agreements are required to ensure the system will function as designed. The maintenance agreements will include any and all maintenance easements required to access and inspect the stormwater treatment practice, and to perform routine maintenance as necessary to ensure proper functioning of the stormwater treatment practice. The owners of the stormwater treatment practice must perform maintenance on the facility and direct their engineer to certify that annual maintenance was completed. This certification must be submitted to the Building Official, each year. In addition, a legally binding covenant specifying the parties responsible for the proper maintenance for all stormwater treatment practices shall be secured prior to issuance for any permits for land disturbance activities.

Section 7. Requirements for Stormwater Management Approval

7.1 Stormwater Management Plan Required for All Developments

Pre-Construction review and approval is required for all developments within the City. Landowners of proposed single family residential units and multi-family units under four units will submit the plan on a form provided by the Building Office.

Landowners of proposed commercial development and multi-family units larger than four units, and under one acre, will submit a Stormwater Management Plan as part of the Site development Process.

Landowners of proposed commercial development and multi-family units larger than four units and one acre or over will submit a copy of the Stormwater Management Plan required by MDEQ under the NPDES Phase I or Phase II Program.

7.2 Stormwater Management Plan Requirements

Required information for the Stormwater Management Plan includes the following information and data, prepared and certified by a registered professional engineer or certified contractor in the State of Mississippi. This information, submitted as a Stormwater management Plan will be submitted with Site Plan documents.

(A) Existing Conditions shown on a topographic map with two foot (2') minimum contours of the land proposed for development or redevelopment. The following will be shown on the map:

1. The banks and centerline of streams and channels;
2. The normal shoreline of lakes, ponds, coastlines and retention/detention basins and lines of inflow and outflow;
3. The location, size and slope of stormwater conduits and drainage swales;
4. Storm, sanitary and combined sewer and outfalls of record;
5. Delineation of upstream and downstream drainage features and watersheds which might be affected by the development;
6. Base flood (100-year) elevation (BFE) and floodways for the property;
7. Environmental features including limits of wetlands areas and any designated natural areas.

(B) Stormwater Plan to be designed to safely and completed manage stormwater runoff onsite and detain increased stormwater runoff to meet standards defined in Section 5 and section 6 of this Ordinance. The plan shall be accompanied by maps and other descriptive material to include the following:

1. The extent of drainage channels on site and direction of the flow of the channels and the flow from the site;
2. Proposed stormwater conveyance practices to be onsite, existing off-site stormwater conveyance system including receiving streams, channels and outfall and inlet locations. Include elevations of locations and high water elevations. Hydrologic and hydraulic design calculations for the pre-development and post-development condition for the design storm proposed in section 5. The calculations for determining peak flows are found in the Stormwater Design Manual, Chapter 6. Stormwater Design Manual shall be used for sizing all stormwater management practices. Calculations will include description of design storm frequency, intensity and duration, time of concentration, soil curve number or runoff coefficients, peak runoff rates and total runoff volumes, infiltration rates, culvert capacities, flow velocities, data on the increase in rate and volume of runoff for the design storm

- identified in Section 6. And documentation of sources for computation methods and field test results.
3. Maintenance and repair Plan to include detailed and maintenance and repair procedures, timeframes for maintenance and proposed maintenance costs.
 4. Maintenance Agreements or Covenants and Maintenance Easements.
 5. Other environmental permits that may be required.

(C) Sanitary waste treatment facilities shall be designed and located on the plan to comply with current Mississippi Department of Health Regulations.

7.3 Performance Bond

The Bay St. Louis City Council may, at its discretion, require the submittal of a performance security or bond prior to issuance of a permit in order to insure that the stormwater practices are installed by the permit holder as required by the approved site plan within a specified period, not to exceed two (2) years. Such bond shall be in an amount adequate to cover the cost of the improvements as determined by the Council, plus an additional Twenty-Five Percent (25%) to cover contingencies, with surety and conditions satisfactory to the Council.

Section 8. Construction Inspection

8.1 Notice of Construction Commencement

The applicant must notify the Building Official in advance before the commencement of construction.

8.2 Record Drawings

All applicants for commercial and multi-family residential units over four units are required to submit actual record drawings for any stormwater management practices located on-site after final construction is completed. The Plan must show the final design specification for all stormwater management facilities and must be certified by a professional engineer. A final inspection is required before the release of any performance security, performance bond or guaranty.

8.3 Landscaping and Stabilization Requirement

Permanent vegetation must be seeded or planted within 30 days after the final grade is reached. Planting guidance for permanent vegetative practices is included in Chapter 5 of the Stormwater Design Manual.

Any area of re-vegetation must exhibit a survival of a minimum of seventy-five percent (75%) of the crop cover throughout the year immediately following re-vegetation. Re-vegetation must be repeated in successive years until the minimum seventy-five (75%) survival for one (1) year is achieved.

8.4 Dedication of Facilities

Whenever drainage facilities are planned to serve several projects or a specific area deemed necessary by the Bay St. Louis Planning Commission, the drainage facilities may be dedicated to City of Bay St. Louis. When these projects are of a regional nature, the City will maintain these facilities. In these cases, access easements shall be provided to the City.

8.5 Inspection of Facilities

The City Engineer shall inspect all drainage facilities while under construction. When facilities are not constructed according to approved plans, the City has the explicit authority to compel compliance and have any situations corrected which are not according to the approved plans. All drainage facilities located on private property, whether dedicated to the City or not, shall be accessible at all times for inspection by the City engineer or other responsible public official.

8.6 Inspection of Sanitary Waste treatment Facilities

The City Engineer shall inspect all sanitary waste treatment facilities while under construction and upon completion to insure proper installation and connection to waste water collection systems when applicable. Proper function of sanitary waste treatment facilities is required prior final approval and issuance of a certificate of occupancy.

Section 9. Maintenance and Repair of Stormwater Facilities

9.1 Maintenance Easement

Prior to the issuance of a permit that has a stormwater management facility as one of the requirements of the permit, the applicant or owner of the site must execute a maintenance easements agreement that shall be binding on all subsequent owners of land served by the stormwater management facility. The agreement shall provide for access to the facility at reasonable times for periodic by the City or their contractor, agent or designee, and for regular assessments of property owners to ensure that the facility is maintained improper working condition to meet design standards and any other provisions established by this Ordinance. The easement agreement shall be recorded by the City in the land records.

9.2 Maintenance Covenants

Maintenance of all stormwater management facilities shall be ensured through the creation of a formal maintenance covenant that must be approved by the City and recorded into the land record prior to final approval. As part of the covenant, a schedule shall be developed for when and how often maintenance will occur to ensure function of the stormwater management facility. The covenant shall also include plans for periodic inspections to ensure proper performance of the facility between scheduled cleanouts.

9.3 Requirements for Maintenance Covenants

All stormwater management facilities must undergo a regular yearly inspection process at a frequency sufficient to determine the functioning ability of the conveyance system and any repair needs; at a minimum this should include inspection prior to the beginning of Hurricane Season, prior to any forecasted major rains that may equal the design requirements and after any major rain events.

9.4 Right-of-Entry Inspection

All drainage facilities located on private property, whether dedicated to the city or not, shall be accessible at all times for inspection by the City engineer or other responsible public officials. All sanitary waste treatment facilities located on private property shall be accessible for inspection for proper function by the City engineer or other responsible public officials where there is reason to suspect that a malfunction has resulted in storm water runoff pollution by unsanitary waste.

9.5 Records of Installation and Maintenance Activities

Parties responsible for the operation and maintenance of a stormwater management facility shall make records of the installation and of all, maintenance and repairs, and shall retain these records for at least five years. These records shall be made available to the City during inspection of the facility and other reasonable times upon request.

9.6 Failure to Maintain Practices

The Building Official will notify the owner of the premises where the BMP is located in writing that maintenance is required. The owner will have 60 days from the receipt of such written notice to bring the BMP into proper working order.

Section 10. Enforcement and Penalties

10.1 Violations

Any person found to be in violation of any of the terms and provisions of this Ordinance shall be found guilty of a misdemeanor and subject to a fine not to exceed \$500 or imprisoned for no more than ninety (90) days or both such fined and imprisonment. A continuance of a violation without reasonable effort on the part of the defendant to correct same shall be and constitute a new and separate offense each day.

10.2 Notice of Violation

If the Building Official shall find that the provisions of this ordinance are violated, the person responsible for such violation shall be notified in writing, indicating the nature of the violation and ordering action necessary to correct it. Among those actions which he/she shall order is discontinuance of any actions on site. In such case that the Building Official is left without any further recourse recourse but to seek police assistance, he may call upon the Bay St. Louis Police Department to furnish him with necessary police personnel to fulfill his duties.

10.3 Stop Work Order

In case any post-construction stormwater practice is constructed, reconstructed, altered, repaired, or converted or any person would be damaged by such violation, in addition to other remedies, the Building Official may institute injunction, mandamus, or other appropriate action in proceeding to prevent violation of the final plan or any element of this Ordinance.

10.4 Restoration of Lands

Violators may be required to restore land to its undisturbed condition. In the events that restoration is not undertaken within a reasonable time, after notice, the City may take necessary corrective action, the cost of which shall become a lien upon the property until paid.

Section 11.

This Ordinance shall take effect thirty (30) days following its adoption.

Councilman Seal moved, seconded by Councilman Taylor that the foregoing ordinance entitled, "AN ORDINANCE REGULATING STORMWATER RUNOFF FROM DEVELOPMENT SITES WITHIN THE CITY OF BAY ST. LOUIS, MISSISSIPPI," be adopted as recommended by the Mayor.

A vote was called for with the following response:

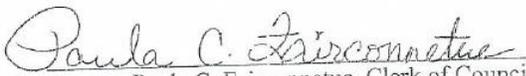

VOTING YEA: Seal, Taylor, Compretta, Farve, and Thriffiley

VOTING NAY: None

CERTIFICATION

I, Paula C. Fairconnetue, Clerk of Council for the City of Bay St. Louis, Mississippi, do hereby certify that the foregoing Ordinance No. 442 is a true and correct extract of the minutes of a public meeting of the City Council held on January 4, 2005, a quorum being present, in the City Hall Annex and recorded in Minute Book 38, minutes of said Council, said Council being the duly elected, qualified and acting governing body of Bay St. Louis.

Presented by me to the Mayor on this, the 7th day of January, 2005.

Paula C. Fairconnetue, Clerk of Council

Approved and signed by me on this, the 16th day of May, 2005.

Edward A. Favre, Mayor
